

WE ARE HIRING!

QA / QA Automation Engineer

What you'll bring...

- Programming skills (ideally JavaScript)
- Ability to work with various flavors of SQL and other databases in general development, troubleshooting and maintenance
- Good knowledge of English (spoken and written)
- Good communication and interaction skills; collaborating in a team environment
- University Degree in Computer Science / related field (or senior year student)

What you'll do...

- Contribute to the design, expansion, and maintenance of our automated test suite
- Develop custom scripts and code for E2E automation
- Integrate automated tests in CI/CD pipelines
- Execute test cases in terms of functionality, performance, reliability, stability and compatibility with other systems
- Analyze results, report and track issues through complete issue life cycle
- Ensure new features meet the requirements
- Validate and approve builds to be released
- Prepare and give product demos and presentations to customers
- Attend conference calls - discuss product requirements with customers
- Set-up complex test environments
- Write and review software documentation

We are offering you a possibility for personal and professional growth within a pleasant environment.
